

Leave the world behind ...

With XR Technolgy by ZENVIEW

What we do

At ZENVIEW, we use highly immersive VR technology to help people reduce stress and increase wellbeing.

But that's not all ...

What is XR

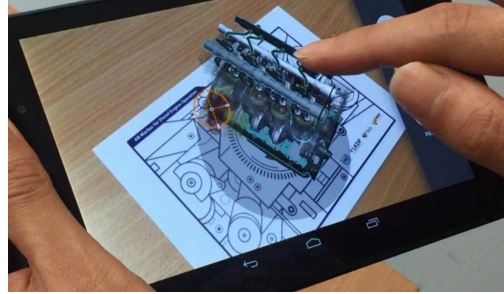

XR / **Extended Reality** is an emerging umbrella term given to all computer – generated environments that either merge the physical and virtual worlds or create an **entirely immersive experience** for the user.

What we offer

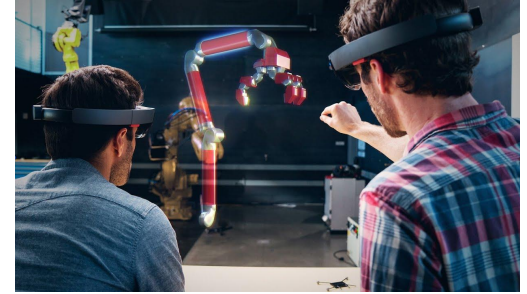

Virtual Reality

Immersive headset experience presenting a computer-simulated, 360-degree-view reality in a virtual world.

Augmented Reality

Computer-generated graphics overlaid on the physical world.

Mixed Reality

A version of augmented reality, sometimes known as hybrid reality, that merges the real and virtual worlds and allows them to interact with each other in real time.

Where to use XR

Medical

Manufacturing

Industrial

Tourism

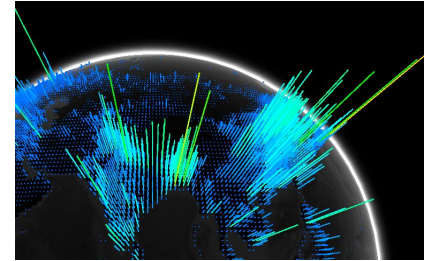

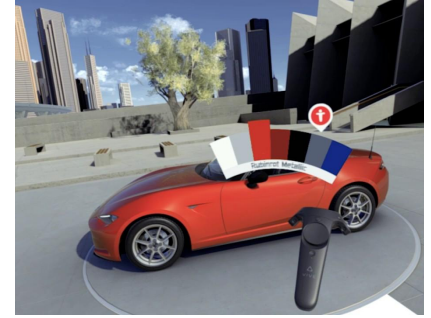

Retail

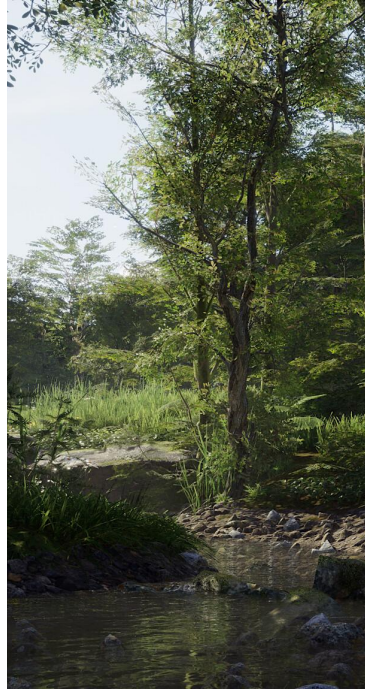

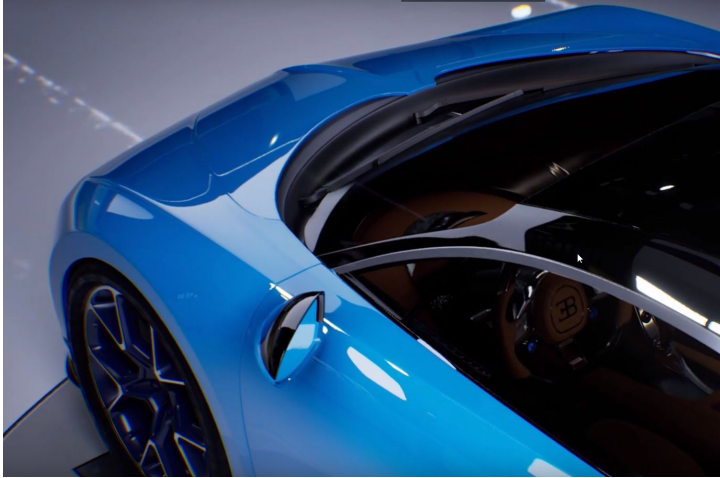

Transportation

Where to use XR

Pushing the level of immersion

What we can offer

ZENVIEW

- The first data-driven VR relaxation platform for the workplace

Extended Reality

- Rapid ideation and opportunity identification
- Real time 3D visualization
- Interactive product configuration in VR / AR
- Architectural Walkthrough

What we are looking for

- Exciting projects in the field of VR, AR and MR
- Professional 3d game developer
- Product Designer
- Research Partnership

Training
Engineering
Education
Retail

ZENVIEW - Relaxation in a new dimension

Architecture
Data visualization
Automotive
